Data: The following table shows the stock prices (Closing Price of that day), trading volumes, and price-to-earnings (P/E) ratios for five companies on a particular trading day.

Company	Stock Price (\$)	Trading Volume (shares)	P/E Ratio
ABC Corp	75.20	1,250,000	18.5
XYZ Inc.	42.75	850,000	12.7
Delta Co.	98.40	1,500,000	22.3
Omega Ltd.	61.15	1,100,000	16.2
Beta Inc.	33.80	675,000	10.5

Calculate the average trading volume for the given stocks.

☐ 1,075,000 shares

☐ 1,250,000 shares

☐ 1,500,000 shares

☐ 875,000 shares

- 72%

1. Section A

Attempted: 39/46

Goldman Sachs Press predicted that crude oil price would hit \$200 and just as it appeared that alternative renewable energy had a chance of becoming an economically viable option, the international price of oil fell by over 70%. After hitting the all-time high of \$147 a barrel, a month ago, crude fell to less than \$40 a barrel, what explains this sharp decline in the international price of oil? There have not been any major new discovery of a hitherto unknown source of oil or gas. The short answer is that the demand does not have to fall by a very sizeable quantity for the price of crude to respond as it did. In the short run, the price elasticity of demand for crude oil is very low. Conversely, in the short run, even a relatively big change in the price of oil does not immediately lower consumption. It takes months or years, of high oil price to incite large changes of energy conservation. World crude oil price had remained at over \$ 60 a barrel for most of 2005-07 without making any major dent in demand. The long answer is more complex. The economic slowdown in US, Europe and Asia along with dollar depreciation and commodity speculation have all had some role in the downward descent in the international price of oil. In recent years, The supply of oil has been rising but not enough to catch up with the rising demand, resulting in an almost vertical escalation in its price. The number of crude oil futures and options contracts have also increased manifold which has led to significant speculation in the oil market. In comparison, the role of the organization of petroleum exporting countries (OPEC) in fixing crude price has considerably weakened. OPEC is often accused of operating as a cartel restricting output, thus keeping prices artificially high. It did succeed in setting the price of crude during the 1970s and the first half of the 80s. But, with increased futures trading and contracts, the control of crude pricing has moved from OPEC to banks and markets that deal with futures trading and contracts. It is true that most oil exporting regions of the world have remained politically unstable, fueling speculation over the price of crude. But there is little evidence that the geopolitical uncertainties in west Asia have improved slide of oil price. OPEC has, in fact, announced its decision to curtail output. However, most oil importers will have a sigh of relief as they find their oil import bills decline except for those who bought options to import oil at prices higher than market prices. Exporting nations, on the other hand, will see their economic prosperity slip. Relatively low price of crude is also bad news for investments in alternative renewable energy that cannot compete with cheaper and non-renewable sources of energy.

Which has the impact of the drop in oil prices (1 Mark)

Select an option

- ☐ exploration for natural gas resources has risen
- ☐ The dollar has fallen sharply
- ☐ OPEC has decided to restrict its production of oil
- ☐ Economic depression in oil-importing countries
- ☐ Drastic fall in demand for crude oil
