Agenda

System Requirements

Below are the system requirements to be ensured by the candidates on their devices in order to smoothly install and run MSB:

Operating System	MAC	Windows (32 Bit)	Windows (64 Bit)
Operating System Version	Mac OS 10.14 and above	Windows 8.1 and above Genuine and licensed OS	Windows 8.1 and above Genuine and licensed OS
Hard Disk (Free Space)	150 MB	500 MB	500 MB
Computer Display	All Versions Supported		
RAM	Minimum 4 GB		
Network Speed	Minimum 1 MBPS		

MSB- Pre-Requisites

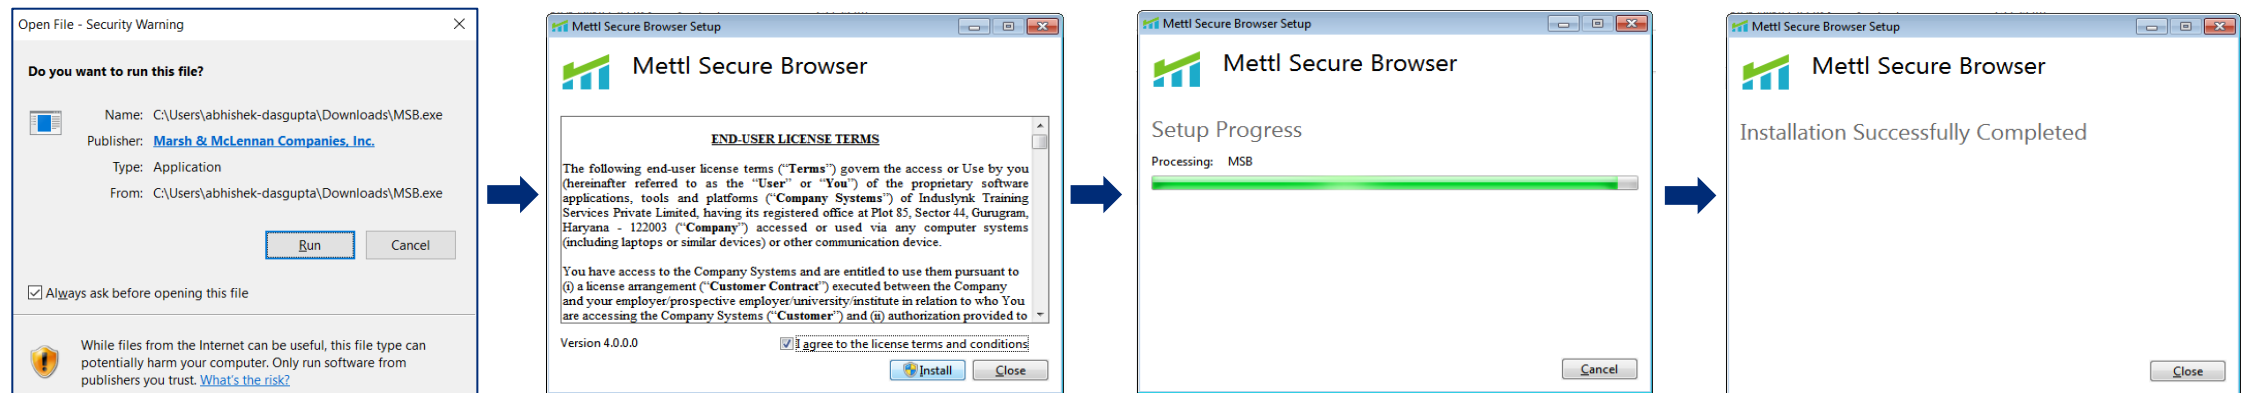

The test-taker must ensure the following for MSB (Mettl Secure Browser) to function properly:

- Make sure there are no pending updates in your operating system
- Check Compatible Anti-Virus/firewall list before installing MSB (List Shared in end)
- The test-taker is required to download and install latest version of MSB. There should be no restrictions on the device preventing the test-taker to do the same.
- Test-taker can download the latest version of MSB through the test invitation email shared by the admin or can directly download by using the following links :
 - ✓ [Download MSB for windows](#)
 - ✓ [Download MSB for mac](#)
- The test-taker must remove any previously installed MSB versions before making a fresh MSB installation. Test-taker machine should have only one MSB installed at any point of time.
- Test-taker should have Administrative rights on the system and must not be logged in as a Guest User. Admin rights are required for installing and launching MSB
- Test-taker should have working camera and microphone, and no third-party application is accessing camera or microphone before starting test
- Test-takers should save all work and close open applications/ software before clicking on the test link to launch MSB. If any prohibited application is found running, MSB will prompt the user to close the application or will close the application automatically
- While running the test, test-taker should avoid hard re-booting the machine. Also, it is advised that the system it is running on power (and not battery)

Installing Mettl Secure Browser- Windows OS

Once the MSB installation file is successfully downloaded on your system, test-taker can install MSB by simply following the below mentioned steps:

- Click on the Mettl Secure Browser (MSB) downloaded file with the name MSB.exe. Click on “Run” to start the process.
- Once the file is downloaded, click on “Install” to start the installation.
- Once the installation is complete, click on “Close” to finish the process.

Note:

- In case there is an update available, uninstall older MSB version and then install latest MSB and launch it

Installing Mettl Secure Browser- MacOS

Once the MSB installation file is successfully downloaded on your system, you can install MSB by simply following the below mentioned steps:

- Double click to open the MSB.dmg file.
- Drag the MSB icon on top of the Applications folder in order to copy it there
- Click on Eject MSB via right click
- When you first start up MSB, you will be warned that you downloaded MSB from the Internet because you downloaded MSB from the official site. Click "Open".

Launching MSB

- Once MSB is successfully installed, the test will be launched* in the secured/ locked-down environment of MSB
- While launching the test, Mettl Secure Browser (MSB) will force-close all prohibited applications active on the system. (Image 1)

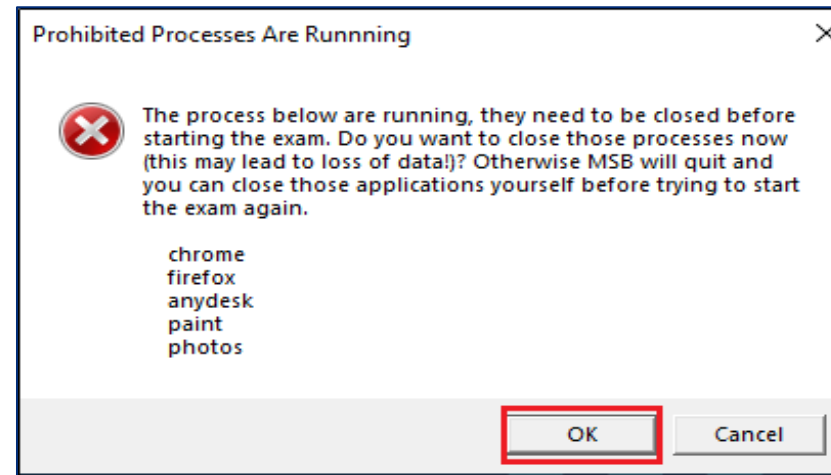

Image 1: Windows

*MSB may take a few seconds to launch. Please be patient and it give it a few seconds before re-trying a launch.

Launching MSB

- If MSB is not able to close all the mentioned applications on its own, it may prompt you to close those applications manually from the Task Manager (Image 2 & 3)
- Kindly open the Task Manager / Activity Monitor on your system, select the mentioned options from the Apps and background processes prompted by MSB and close them by clicking on End Task.

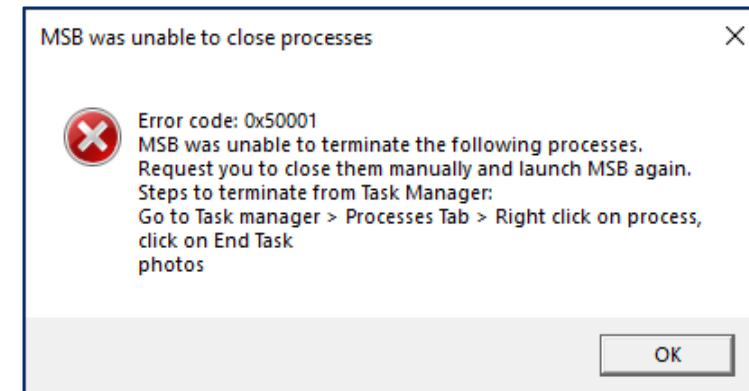

Image 3 Windows

*MSB may take a few seconds to launch. Please be patient and it give it a few seconds before re-trying a launch.

MSB- FAQs

Q. I am unable to launch test on MSB, it's crashing?

Test-taker has to follow the steps described below:

1. Quit MSB (If MSB is not quitting then **long Press Power Key*** and restart)
2. Uninstall MSB from your device
3. Ensure the following:
 - There are no pending OS updates on your device
 - Your Antivirus is compatible (Check list at the end). If not then either add MSB as trusted application in your AV or disable AV for course of assessment
4. Download latest version of MSB again and install
5. While launching MSB, make sure you do not launch it multiple times in quick succession

If the issue still persists, then kindly reach out to Mercer Mettl Support Team

Q. There is no activity after clicking on start test in MSB

1. Quit MSB (If MSB is not quitting then long Press Power Key and reboot*)
2. Uninstall MSB from your device
3. Check internet connection and download latest version of MSB again and install
4. Ensure your Antivirus is compatible (Check list at the end). If not then either add MSB as trusted application in your AV or disable AV for course of assessment
5. If the issue still persists, then kindly reach out to Mercer Mettl Support Team

Note: *In case after quitting MSB some device settings are altered like you do not have access to Windows security screen (Ctrl+Alt+Del) or power icon is not visible, then try re-booting your machine. In case the issue, please reach out to Mercer Mettl support. This happens in extremely rare cases because anti-virus has falsely interfered with MSB's working and has not let it quit gracefully. Mercer Mettl support team will help you reset the issues caused by Anti-virus.

MSB- FAQs

Q. I am getting an error that “MSB Set Up Failed (SEB)” or “Unable to fetch configuration details”

1. Uninstall the MSB from your system
2. Go to Windows Update page in your system click on Check for Update and install if there are any pending updates
3. Once the updates are installed, reboot the system
4. Download a new file and Install the MSB

Q. I am getting an error that Prohibited Processes are Running

1. Click Ok to close the processes (MSB will automatically try to close them)
2. If issue still persists, Without clicking on Ok or Cancel, open Task Manager, by pressing Shift+Ctrl+Esc key on the keyboard together
3. Once the Task Manager is open, close the mentioned applications one by one from the task manager using the End Task/End Process button.

Q. I am getting error for Webcam and Microphone Permissions

1. Ensure the following:
 - a. Only internal/integrated camera or microphone are permitted
 - b. Camera and Microphone are in working condition
 - c. No third-party app is using Camera or Microphone
 - d. For MAC, please ensure that MSB app has access to Camera & Microphone permission. Follow these [steps](#) to grant Microphone & Camera permission to MSB
2. There might be a possibility that your Antivirus is unjustly blocking MSB from getting camera and Microphone Permissions. Kindly ensure Antivirus is compatible (Check list at the end). If not then either add MSB as trusted application in your AV (For Kaspersky, please refer to these [steps](#)) or disable AV for course of assessment.

AVs and MSB Windows – Compatible list of AVs

What to do if your antivirus is not in the compatibility list?

In case you are facing issues with MSB and have ruled out other root causes, please –

1. Add MSB to trusted application in your antivirus so that it does not interfere with MSB working

- A simple internet search can help you find the steps to add a software as a trusted application in your anti-virus
- For test-takers with Kaspersky Antivirus, follow these [steps](#)

OR

2. Disable antivirus for the course of MSB test

Disclaimer: These virus definitions / policies of AV's keep evolving frequently and are usually cloud based leading to frequent changes in compatibilities with other software such as MSB. Only the respective version tested for antivirus is compatible.

Compatible/ No Issues Detected	
Antivirus	Version
