

WTW HireVue Question Bank + Model Answers

(for 2026 Software Engineer Graduate Program – Individual Marketplace)

1 Tell me about yourself.

Purpose: First impression; check communication, clarity, and relevance.

Sample Answer:

“I’m Ramesh Chandra Soren, currently pursuing my B.Tech in Computer Science. I have a strong foundation in C, C++, and Python, and I recently worked on a College ERP backend using PHP and SQL, handling authentication and data management for over a thousand users. I enjoy building systems that are both efficient and scalable. Outside academics, I’ve been exploring data engineering concepts like indexing and NoSQL, which align well with WTW’s focus on data-driven solutions. I’m excited to apply my technical and problem-solving skills in a professional environment like WTW.”

2 Why do you want to work at WTW?

Purpose: Tests motivation and company understanding.

Sample Answer:

“WTW stands out for its blend of technology and analytics to solve real-world business problems, especially in insurance and risk management. I’m drawn to how WTW integrates innovation, data, and teamwork to help clients make better decisions. The Early Careers program offers structured learning, mentorship, and exposure to global teams — a perfect environment for me to grow as a software engineer while contributing to impactful solutions.”

3 Tell me about a time you worked in a team.

Purpose: Collaboration, communication, conflict handling.

Sample Answer (STAR):

Situation: During my college ERP project, our 4-member team had to integrate frontend and backend under a tight deadline.

Task: I was responsible for backend APIs and database optimization.

Action: I scheduled short stand-ups to sync progress and created API

documentation so others could integrate easily. When we had merge conflicts, I helped resolve them by using Git branching strategy.

Result: We completed the project two days early with 95% functionality achieved. The structured teamwork approach made integration smooth and efficient.

4 Describe a time you faced a technical challenge and how you solved it.

Purpose: Evaluates problem-solving and debugging process.

Sample Answer (STAR):

Situation: While working on SQL queries for a report generation module, performance dropped drastically when data grew.

Task: My goal was to reduce query execution time.

Action: I analyzed query plans, added proper indexes, and replaced nested subqueries with joins. I also cached static lookups in the application layer.

Result: The execution time dropped from 12 seconds to under 2 seconds. I learned the importance of analyzing real data and query optimization early in development.

5 What are your strengths and weaknesses?

Purpose: Self-awareness and growth mindset.

Sample Answer:

“My strength is analytical thinking — I like breaking complex problems into smaller logical steps. This helps in both debugging and designing efficient solutions.

My weakness used to be spending too much time perfecting code before sharing it, but I’m learning to iterate faster by seeking peer feedback earlier in the process.”

6 Tell me about a time you failed or made a mistake. What did you learn?

Purpose: Tests humility, learning, and accountability.

Sample Answer (STAR):

Situation: In one mini-project, I accidentally overwrote a teammate’s code due to poor Git usage.

Task: I had to restore his changes and ensure we didn’t lose work again.

Action: I researched Git best practices, recovered the code from logs, and implemented branch-based development with regular commits.

Result: The issue was fixed, and since then, I've become very careful about version control and collaboration discipline.

7 Describe a time when you had to learn a new technology quickly.

Sample Answer (STAR):

Situation: For a data engineering internship test, I had to use MongoDB — which I hadn't learned before.

Task: Deliver a small ETL pipeline within two days.

Action: I went through documentation, watched tutorials, and practiced CRUD operations before implementing the task.

Result: I completed it successfully and understood the importance of quick learning through hands-on exploration — something that will help me adapt at WTW.”

8 What do you know about WTW's work or values?

Purpose: Tests research effort and cultural fit.

Sample Answer:

“WTW is a global advisory, broking, and solutions company that helps clients manage risk and improve performance. I admire how WTW uses analytics and technology to support decision-making in areas like insurance, employee benefits, and investments. The company's core values — teamwork, integrity, and client focus — align with my own approach to collaborative problem-solving.”

9 Where do you see yourself in 5 years?

Purpose: Career vision and alignment.

Sample Answer:

“In five years, I see myself as a full-stack or data engineer contributing to large-scale platforms at WTW. I want to be someone who not only writes reliable code but also mentors new team members and contributes to architectural decisions. WTW's global environment offers the learning curve and exposure to reach that goal.”

10 How do you handle pressure or tight deadlines?

Sample Answer (STAR):

Situation: During final exams, I was also finishing a project submission.

Task: Manage both without compromising quality.

Action: I prioritized tasks, created a timeline, and took short breaks to stay focused.

Result: I submitted everything on time and realized structured planning reduces stress. I now apply the same strategy in project work.”

Bonus: Technical Project / Academic Question

“Explain a technical project you’re proud of.”

Sample Answer:

“In my College ERP system project, I built secure login and role-based access control using PHP sessions and SQL constraints. I designed normalized tables for students, staff, and admin workflows and optimized queries with indexes. The experience taught me practical backend design and database performance tuning — skills that will help me contribute from day one at WTW.”
