

Site Reliability Engineer

About Media.net

Media.net is a **leading global AdTech company** that helps connect advertisers with the right audience across the internet. Our technology powers ads on over 500,000 websites, helping publishers earn money and advertisers reach people who are interested in their products.

We use **advanced computer programs, machine learning, and data analysis** to deliver effective advertising solutions. This means our software learns and improves over time to show the right ads to the right people, maximizing results for our clients.

Headquartered in Dubai, with its U.S. headquarters in New York and key offices in Los Angeles, Zurich, Mumbai, and Bangalore, Media.net is home to over 1200+ talented professionals. We combine the **agility and innovation of a startup with the stability and resources of a global leader**, focusing on teamwork and building products that **shape the future of online advertising**.

About the Role

We are looking for a highly motivated **Site Reliability Engineer (SRE)** who is passionate about **building and maintaining scalable, reliable, and efficient systems**. In this role, you will collaborate closely with product and engineering teams to design, automate, and optimize infrastructure and applications that power large-scale systems. You will be responsible for ensuring high availability, driving operational best practices, and continuously improving system performance.

This is an exciting opportunity to work in a fast-paced environment, solve complex technical challenges, and contribute to building robust production systems from the ground up.

Key Responsibilities

- Collaborate with product and engineering teams to **design, build, and maintain highly available systems and software**, while driving operational best practices
- **Identify and implement opportunities** to build resilient systems that ensure business continuity
- **Troubleshoot issues** across multiple layers — hardware, software, database, and network — perform **root cause analysis (RCA)**, and implement permanent fixes
- Set up **proactive monitoring, alerting, trend analysis, and self-healing mechanisms** to ensure system stability
- **Develop and maintain continuous delivery pipelines** across production and staging environments
- Identify areas of **manual intervention** and **automate processes** wherever possible to improve efficiency

- Ensure **infrastructure and platform security** by following best practices and compliance standards
- Use and maintain **infrastructure and configuration management tools** such as Puppet, Chef, Ansible, and Terraform for deployment and management
- Demonstrate **adaptability** in a fast-paced environment, effectively adjusting priorities based on business needs

Desired Skills

- **Tech-savvy & curious** — you love exploring new technologies in software development
- **Analytical mindset** — you can break down problems, find patterns, and make data-driven decisions
- **Creative problem-solver** — you think out of the box and experiment with new approaches
- **Result-oriented** — you can deliver working solutions within deadlines in a fast-paced environment
- **Collaborative communicator** — you can explain ideas clearly and work with diverse teams
- **Adaptable multi-tasker** — comfortable switching between coding, debugging, and optimizing workflows

Why Join Us?

- Work on **industry-leading ad-tech products** impacting millions worldwide
- Be part of a **fast-moving engineering culture**
- Collaborate with talented technologists in an **inclusive and innovative environment**

Compensation & Benefits

- Compensation: INR 13,00,000 LPA
- Retention Bonus: INR 1,50,000 (One-time)
- Other Benefits:
 - Flexible work hours and leaves
 - Insurance benefits for you and family
 - Fully equipped gym
 - Education sponsorship programs
 - Maternity/Paternity leave benefits and adoption assistance
 - Butler and concierge services
 - Team off sites and celebrations
 - And many more....
