Job Description (SDE)

We seek a passionate and motivated Software Engineer to design, develop, and implement software solutions. As a Software Engineer, you will be responsible for gathering user requirements, defining system functionality, and writing clean, efficient code in languages such as Java,.NET, etc.

Ultimately, you will be key in building high-quality, innovative software that meets coding standards and technical design specifications.

Responsibilities:

- Execute the complete software development life cycle (SDLC).
- Gather user requirements and define system functionality.
- Write well-designed, testable, and efficient code.
- Create flowcharts, layouts, and documentation to identify system requirements and solutions.
- Integrate software components into fully functional systems.
- Develop software verification plans and quality assurance procedures.
- Maintain and document software functionality.
- Troubleshoot, debug and upgrade existing software systems.
- Deploy software programs and evaluate user feedback.
- Ensure compliance with project timelines and industry standards.
- Continuously update software with new features and enhancements.

Requirements and Skills:

- Willingness to learn how to design interactive applications.
- Proficiency in programming languages such as Java, C, C++, or others.
- Strong knowledge of relational databases, SQL, MongoDB, and Maria DB.
- Understanding of developing web applications using frameworks.
- Strong ability to document requirements and specifications clearly

If you are passionate about software development and eager to learn in a dynamic environment, we would love to have you on our team!

Job Description (Implementation Consultant):

An Implementation Consultant is a client-facing professional who guides customers through the implementation and technical setup of products or services. This role is essential in ensuring the successful deployment and adoption of solutions by leveraging technical expertise, exceptional customer service, and close collaboration with sales and product teams. The position also requires occasional travel for business purposes.

Key Responsibilities:

- **Technical Expertise:** Leverage in-depth knowledge of the product's capabilities and features to provide expert guidance and support throughout the implementation process.
- **Customer Relationship Management:** Build and nurture strong, long-term relationships with clients, ensuring successful implementation and high levels of satisfaction.
- **Product Training & Onboarding:** Deliver training and onboarding sessions to customers, ensuring they are equipped with the necessary skills and knowledge to use the product effectively.
- **Sales Support & Collaboration:** Work closely with the sales team to support the sales process, identify upselling opportunities, and help drive customer retention.
- **Product Performance Monitoring:** Track the performance of the implemented solution, providing feedback and detailed reports to product teams and stakeholders to inform ongoing product improvements.

Requirements:

Excellent **written and verbal communication** skills for interacting with customers, team members, and subject matter experts.

Ability to clearly explain complex technical concepts to technical stakeholders.**Role:** Implementation Consultant
Industry Type: Software Product
